

Sette 270, 270W Display Replacement

Tools Needed: T-10 Torx Bit, #0 Philips, #2 Philips, Bit Driver, Pliers (not necessary)

***** Unplug the power supply cord from the rear of the machine. *****

1. Tilt the machine forward on a hand towel, resting the machine on its face

2. Remove the rear rubber foot (use pliers if needed)

3. Remove the four Torx screws from the rear of the machine, and the one torx screw that lies inside the rear foot slot. Screw positions indicated below.

4. Stand the machine back upright and gently pull the entire rear housing towards the back of the grinder. There will be wires connected to the casing so be gentle.

5. There will be two wires attached the casing. You can leave these wires connected and move the case to the side. Alternatively, you can gently remove the spade connectors and set the case to the side.

6. Remove the (2) T10 and (1) #0 Philips screws indicated in red above. Unplug the two wires indicated in purple above by grasping the white connector and wiggling/pulling to unplug from the socket. Do not yank on the wire bundle to unplug the connector.

7. Remove the two #2 Philips screws indicated in red above

8. Pull the display forward and off the body. Install the new display. Plug in the (2) connectors, reinsert (2) #2 philips, (2) T10, and (1) #0 Philips w/green wire.

Reassembly

1. If you removed the wires during disassembly, slide the spade clips back onto the interlock switch.

*Pay attention to how the wires naturally want to sit. The wires will want to slide on and lie in the grinder a certain way and if you put it back the way it came apart, it will go together much easier.

2. Get the case roughly in position, as shown above

3. Work the case on such that it is flush with the sides and ready to slide forward to finish installation

4. Alternate pushing on the bottom and on the top, as depicted above, to slide the case the rest of the way forward into position.
5. Reinstall the screws and feet
